

## Presentation

---

Tuesday, September 29, 2015 10:49 AM

(Under construction)

### PowerPoint slides for presentation

#### Suggestions for your presentation

- Be ready to give a short 7-minute presentation during the last lecture. If it takes longer than that, you will start losing points
  - The presentation should describe your design and solution approaches.
  - Talk about your design - high level, i.e., **do not** show code, flow charts, top down charts or lengthy algorithms.
  - Talk about your assumptions and constraints
  - Talk about any external components or tools: point out how you integrated it and what were the difficulties
  - Focus on the "Discuss" aspect mentioned in Iteration 3 item 1
- Discuss
    - Database design and results;
    - Which NF each of your relations are in: did you verify all the NFs discussed in class? If your design seems to already be normalized, make sure you indicate **why** (describe how it complies with 3NF or so)
    - Evaluation of your project (e.g., How much effort was spent overall? What went right? What went wrong? How would you do it differently if you have to do again? Etc.). If you had another week, what improvements would you focus on?
